LONGEVITY LIFE ACADEMY

The Longevity Masterclass

with Julie Gibson Clark

Second slowest ager in the world, 2023. Structural engineer. Twenty-five years as the scientist and the experiment.

I didn't do this to win.

Running from

Dementia.
Alzheimer's.
Parkinson's.
The silent decade of decline.

Running to

Here for my son, all the days of his life.
Here for grandkids.
Another possibility for how we age.

Ten years pass.
By this test, I age about six.

0.665

Julie's pace of aging. Most people: 1.0.

The speed towards death.

Longevity is like a cake.

Icing	Sauna, peptides, stem cells, light therapies, the gadgets on your feed.
Stress	The layer people skip.
Movement	Four types, four parts of you.
Food	Four pillars, no religion.
Sleep	The repair shift. The bottom of the cake.
Menopause	One thin layer at the base, for half the room.

Nobody has ever eaten a bowl of icing and called it a good cake.

Not wrong. Not first.

affordable

real money

$2,000,000 a year

$12 a day

Julie, mostly groceries

sauna

40% lower risk of death

supplements *NAD drips* *peptides* *stem cells*

Sleep, food, movement and stress do most of the work. Icing on nothing is a bowl of frosting.

Menopause therapy is a layer, not icing.

Under sixty, or within ten years of menopause, the benefits outweigh the risks.

Find a doctor with the letters MSCP.

Sleep is the repair shift.

48%

lower mortality risk for the most regular sleepers.

Same bedtime, every single day.

"I'll sleep when I die,"

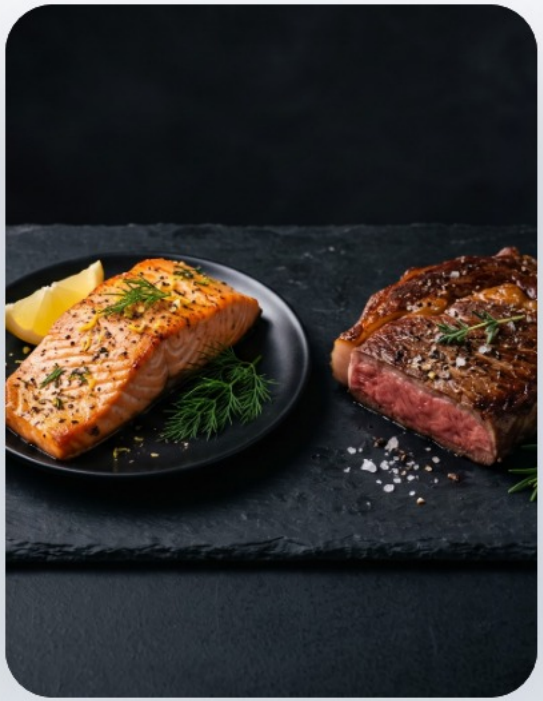

said the person aging at twice the normal speed.

Take the religion out of your diet.

~~*vegan*~~ ~~*keto*~~ ~~*Mediterranean*~~ ~~*carnivore*~~

Fiber variety

Protein

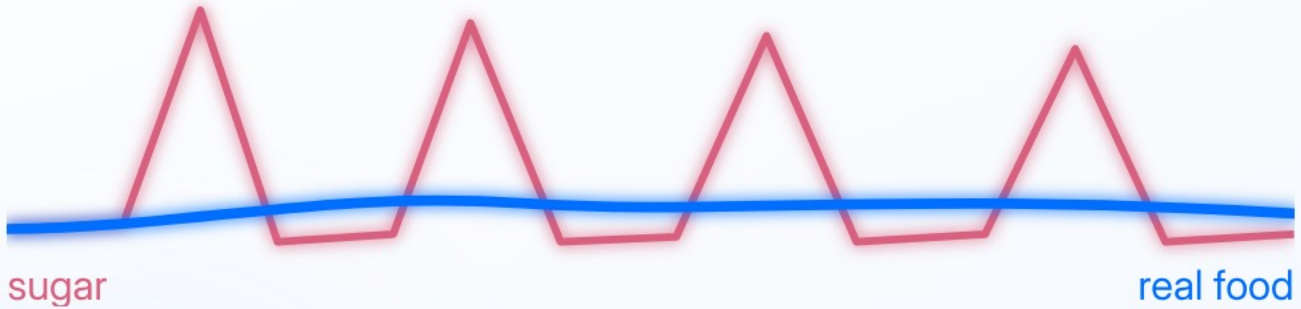

Deep color

Real food

The one thing every doctor agrees on.

25 g

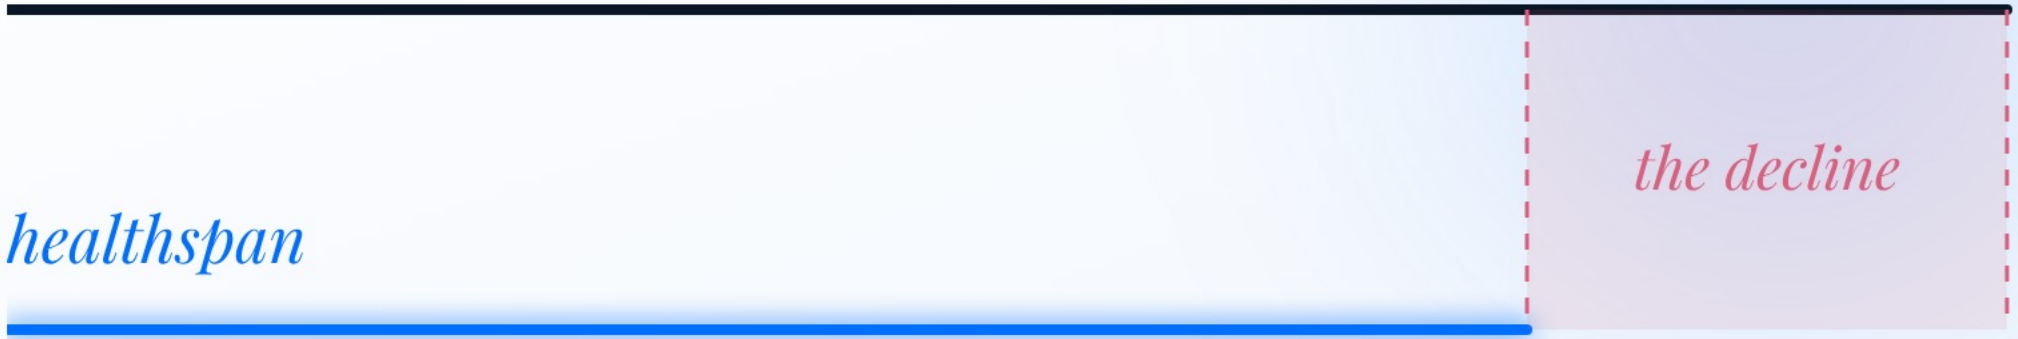

of added sugar a day. That is the ceiling.

Spike, signal, scar. The scar is the crust of a crème brûlée, on your skin and inside your arteries.

Same age.

lifespan

12.4 years of decline at the end, on average, in the United States. The best defense is movement.

Four types of movement, four parts of you.

Weights

Muscles, bones, brain.

VO2 max

Heart and lungs.

Zone 2

Metabolic health, heart.

Balance

Brain, and safety for the other three.

A portfolio, not one stock. A runner adds weights. A lifter adds a walk. A yogi adds both.

Where each type lands.

Brain
weights, balance

Heart, lungs
VO2 max, zone 2

Muscle, bone
weights

Balance, feet
mobility

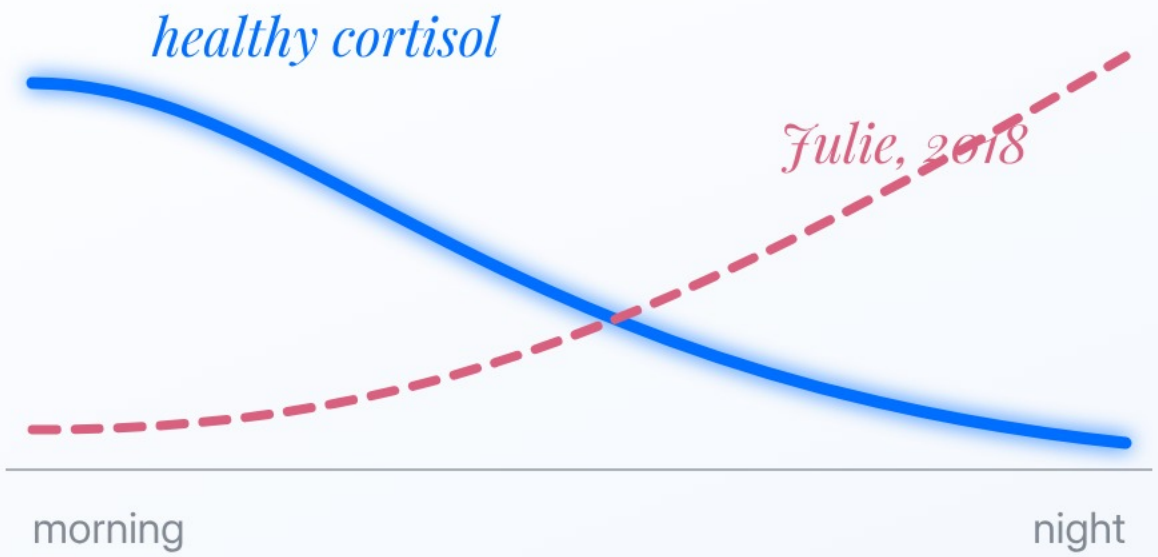

7,000 steps a day: 47% lower risk of dying.

My weekly longevity protocol looks like this.

Mon	Tue	Wed	Thu	Fri	Sat	Sun
Weights then sauna	**Zone 2** a walk	**Weights** then sauna	**VO2 max** bursts	**Weights** then sauna	**Zone 2** a hike	**Balance** mobility

Every day: a walk after dinner and one stress reset. Start with a walk and a few air squats while the coffee brews.

The layer people skip.

Six months of meditation. The curve normalized.

It has stayed that way since.

The free tool: double inhale through the nose, one long exhale. Three times. Thirty seconds.

Julie Gibson Clark's Longevity Protocol.

The day is built backward from bedtime.

Lights out at nine sets dinner at six. Borrow the order, not the clock.

5:00
Wake. Water, light.

7:00
Move, then sauna.

8:00
Eat.

9:00
Last coffee.

Midday
Main meal, a walk.

1:00
Reset.

6:00
Kitchen closes.

8:00
Screens off.

9:00
Lights out.

Longevity Life Academy by eTeacher Group

Test. Then buy.

A watch, a notebook	steps, resting heart rate, sleep
HbA1c	sugar stuck to your proteins
A CGM, two weeks	what spikes you
A blood panel	vitamin D, homocysteine, inflammation
DunedinPACE	your pace of aging

A blood test tells you where the cake has a hole, so you know where to put the icing.

Why. Intention. Resources.

Three questions before anything new goes into your life.

Does this fit?

A sauna session fits. A 9 PM bedtime fits. Not willpower.
